**General Rules - Translational and clinical research Grants**

The Foundation Against Cancer (FAC) funds grants to encourage translational and clinical oncology research in Belgium.

Project selection entails **two phases**:

- The **first phase of selection** is based on a **letter of intent (LOI)**, submitted by the lead applicant to the FAC within the prescribed deadline. **Projects will be preselected, based on the LOI**, by members of the Scientific Committee. All applicants will be notified personally by mail of the results of this preselection. The preselected candidates will then be invited to submit a full application form to the FAC within a prescribed deadline.

- In the **second phase** the members of the Scientific Committee and three external international referees, appointed by the FAC’s Scientific Committee, will analyze the **full application forms** (FAF). The final selection will be made by the Scientific Committee in a plenary session.

**Requisites for participation**

All researchers, affiliated to a **research or hospital facility**, subordinate to a nonprofit association, a public utility foundation or a private foundation, are authorized to submit a research proposal insofar as the research will be conducted in **Belgium** and with no direct commercial purpose.

A team that is currently already funded by the FAC can:

- put in a new request provided that this new request focuses on a research domain sufficiently different from the project being funded at that time;
- put in a new request that is linked to the project being funded at that time, provided the first one will end when funding for the new one will start.

**Letter of Intent (LOI)**

A letter of intent can be submitted by a single lead applicant or several research teams (co-applicants from different universities or hospitals) jointly. The applicant is not allowed to submit the same research project simultaneously to the Fundamental Scientific Committee as well as to the Translational and Clinical Scientific Committee.
The applicant is allowed to submit **only one translational & clinical research project** as lead applicant\(^1\) (principal investigator) or co-applicant\(^2\) (principal investigator from another university or hospital other than the lead applicant).

Only a lead applicant and co-applicant with a permanent postdoctoral position\(^3\) in a Belgian research facility or hospital can submit a research project.

This initial choice by the applicant for one or the other Committee (i.e. Fundamental or Translational and Clinical), is essential as the letter of intent cannot be transferred from one Scientific Committee to the other.

The letter of intent should be written in **English**.

**Full Application Form (FAF)**

The lead applicant will be notified personally if his/her letter of intent has been preselected. The lead applicant is then invited to submit a full application form (FAF) to the FAC within the prescribed deadline.

**Research project**

*Translational research*: The project should offer clear prospects for the transfer of results from fundamental research to clinical research or from clinical research to fundamental research with the objective of improving prevention (primary or secondary prevention), diagnosis and/or treatment of cancer. Its scientific merit should be of the highest quality. Its objectives and approach should be original. It should be the major research project of the researcher and his/her team.

*Clinical research*: The project should offer clear prospects for the improvement of prevention (next to primary or secondary prevention), diagnosis and/or treatment of cancer. Its scientific merit should be of the highest quality. Its object and approach should be original. It should be a major research project of the researcher and his/her team.

---

\(^1\) **Lead applicant**: The lead applicant is the person who actively applies for a Grant. He/she is the leader of the project and he/she has the primary responsibility for the intellectual direction of the research. He/she assumes also financial responsibility for the Grant.

\(^2\) **Co-applicant**: The co-applicant is a researcher participating in a multicentric grant application and who makes a significant contribution to the intellectual direction of the research. He/she has also the responsibility of the financial and scientific aspects of the research conducted in their university/clinical institution.

\(^3\) **A permanent postdoctoral position** is occupied by a permanent research worker holding a PhD in a research institute or at university level, with scientific and financial autonomy.
Duration of the grant

Applicants may request funding for a period of one to four years. The Translational and Clinical Scientific Committee reserves the right to reduce the duration of the grant when appropriate.

After acceptance of the research project, a possible extension of the project’s time schedule can be granted for a period not exceeding one year and without impact on the total amount of support, if duly motivate. Any request to prolong the project for more than one year will have to be submitted to the Translational and Clinical Scientific Committee.

Scientific evaluation of the project

The scientific evaluation of the project falls under the jurisdiction of the Chairman and the members of the Translational and Clinical Scientific Committee of the FAC. As mentioned above, each project will also be submitted to 3 external international reviewers, appointed by the Scientific committee. The final score will consist of the external international referees’ and Scientific committee’s scores.

The principal criteria for quality during the evaluation of the project are:
- the project’s scientific pertinence and original character;
- results of previous research and publications of the applying team;
- track record of the applying team and scientific environment.

Selection of the projects made by the Translational and Clinical Scientific Committee cannot be challenged.

Costs covered by the grant

The funds granted by the FAC can be used to cover the execution costs of the project as detailed in the Full Application Form. This may include remuneration of the scientific and technical coworkers as well as working and equipment costs as stated and detailed in the request for funds, linked to the execution of the project (laboratory supplies and products; acquisition, installation and maintenance of scientific and technical devices and instruments, etc.).

No excess of the total amount will be authorized, but transfer from one allocation to another will be permitted pending authorization from the FAC.

Overhead

The research organization, whatever its legal status (nonprofit association, public utility foundation, private foundation …) is not authorized to withdraw overhead from the funds granted by the Foundation.
**Maximum requested amount**

The maximum amount of funding granted may not exceed € 400 000 (VAT inclusive) per project (unicentric or multicentric).

**Beneficiary financial account**

Upon submission of the funding request, the applicant must provide an account number of the beneficiary. This account must be **imperatively** allocated to an institution having the status of nonprofit association, public utility foundation or private foundation, with consent of the legal representative(s).

The applicant will attach to the application a duly completed and signed financial identification sheet (FIS).

The FAC reserves the right to request a copy of the articles of the account holder (nonprofit association, public utility foundation or private foundation).

**Payment schedule**

- **For one-year projects**

  The first deposit will be made within the month following the signature of the agreement with the FAC if all the conditions are met. The second deposit will be made halfway through the project scheduled timeline.

- **For projects from one up to 3 years long**

  The first deposit will be made within the month following the signature of the agreement with the FAC. The following deposits will be carried out bi-annually up until halfway through the mandate.

  Halfway through the mandate, continuation of the bi-annual payments will be decided according to an intermediate report and the bank statement testifying to the use of at least 2/3 of the already allocated amounts. This bank statement must be validated by the financial director of the research institution. If 2/3 of the allocated funds have not yet been used at this stage, payments will be interrupted until an additional bank statement is received testifying that this expenses threshold has been reached. One or several simultaneous installments will then be paid as not to modify the total duration of the granting.

- **For four-year projects**

  The first deposit will be made within the month following the signature of the agreement with the FAC. The following deposits will be carried out bi-annually up until halfway through the mandate.

  Halfway through the mandate, the translational and clinical scientific committee will evaluate the progression of the project and will decide on the continuation of the granting. The applicant does not have the possibility of obtaining an increase
of the funds granted initially. The subsequent bi-annual payments will be determined according to this evaluation based on the intermediate report sent by the beneficiary. The applicant will also provide a bank statement testifying to the use of at least 2/3 of the amounts already allocated. This bank statement must be validated by the financial director of the research institution. If 2/3 of the allocated funds have not yet been used at this stage, payments will be interrupted until an additional bank statement is received testifying that this expenses threshold has been reached. One or several simultaneous installments will then be paid as not to modify the total duration of the granting.

Commitment of the research team to the FAC

By submitting a request for funds, the applicant commits him/herself to honor the requirements of the granting regulations.

When retained by the FAC for funding, the beneficiary will be asked to sign an agreement, whereby he/she commits himself/herself to:

- Provide an intermediary report halfway through the agreement, stating the progression of the research as well as detailing the forthcoming steps up until the end of the agreement. This report will come with a bank statement, validated by the financial director of the research institution, detailing the amount and nature of the expenses made thus far.

- Provide a final report and a certified bank statement 2 months after the end of the agreement between the research institution and the FAC.

- Participate in the communication campaigns, whatever its nature, which the Foundation wishes to organize to support research.

- Provide at the explicit demand of the FAC, of its accountant or its Scientific Committee, all information, document or media, whatever their nature, needed to better understand the use of the funds granted.

If selected, the candidate accepts the installation, in the hospital(s) where the study takes place, of an “infokiosk” provided by the FAC for the duration of the project financing. This infokiosk will be located in a strategic place for patients circulation (waiting room, hall …) chosen by mutual agreement. In this case, the first payment will be made in the month following the effective installation of the infokiosk.
